Basketweaver — User Manual

Basketweaver is a real-time timing overlay for EverQuest fistweaving monks. It reads your EQ log file and draws a scrolling highway showing exactly when to swap to your fist weapon so your offhand round lands without clipping your mainhand swing timer.

Table of Contents

1. First-Time Setup
2. Understanding the Overlay
3. Timing Your Weaves
4. Calibration
5. Auto-Detection with /mystats
6. Tray Menu Reference
7. Keyboard Shortcuts
8. Troubleshooting

---

1. First-Time Setup

Launch

Double-click **Basketweaver** from the Start Menu or desktop shortcut. On first launch a file picker will open automatically.

Select Your Log File

Navigate to your EverQuest folder and select your character's log file:

```
C:\TAKP\TAKPv22\eqlog_YourName_server.txt
```

> *Make sure EverQuest has logging enabled. In-game command:* `/Log on`

Basketweaver remembers your log file between sessions.

Set Your Mainhand Weapon

Right-click the tray icon → **Mainhand Delay** → select your weapon.

Weapon	Delay
Imbued Fighter's Staff	4.0s
Ton Po's Bo Stick of Understanding	4.0s
Bo Staff of Trorsmang	3.5s
Abashi's Rod of Disillusionment	3.0s
Caen's Bo Staff of Fury	3.0s
Tranquil Staff	3.0s

Set Your Offhand (Fist) Weapon Delay

Right-click the tray icon → **Offhand Delay** → select the delay that matches your fist weapon. Default is 1.6s (delay 16 — standard monk fists).

> ***Tip:*** *Use the* `/mystats` *calibration macro to auto-detect this. See Section 5.*

---

2. Understanding the Overlay

The overlay is a scrolling "highway" that sits on top of EverQuest. Notes approach from the right and travel left toward the hit zone.

```
┌──────────────────────────────────────────────────────────────┐
│ Gabbiz                                          2.0s  100%   │ ← Header
├──────────────────────────────────────────────────────────────┤
│                                                              │
│  ◉  ·  ·  ·  ·  ·  ·  [====GREEN BOX====]│  ·  ·  ●  ·  ·  · │ ← Highway
│                                          │                   │

│                                       (mainhand    (next weave) │
│                                        swing)                  │
├──────────────────────────────────────────────────────────────┤
│  Score: 850   Combo x3   Acc: 87%                            │ ← Footer
└──────────────────────────────────────────────────────────────┘
```

Elements

◉ **Hit Zone** (gold circle, left side) This is your timing target. Weave actions are judged here.

● **Blue Dot** (note) Each blue dot represents one upcoming weave opportunity. It travels left along the highway and should reach the hit zone while the green box is overlapping it.

[===GREEN BOX===] (green rectangle) The safe weave window. This is the time between your mainhand swings during which it is safe to initiate a fist weave. Width = `mainhand interval - fist weapon delay`. Swap weapons while this box is at the hit zone.

│ **Orange Bar** (thin vertical line at left edge of green box) Marks the exact moment your mainhand will swing next. When the orange bar reaches the hit zone, your mainhand fires. Do **not** initiate a weave after this point — you won't have time before the next swing.

---

3. Timing Your Weaves

The Core Loop

```
                        Time flows this way →→→→→→→→
                        Notes scroll this way ←←←←←←

 ──────────────────────────────────────────────────────────────────
  PAST       Hit Zone          Highway                    FUTURE
 ──────────────────────────────────────────────────────────────────
```

```
Step 1: Green box approaching hit zone
·  ·  ·  ◉  ·  ·  ·  ·  ·  [====GREEN====]│  ·  ●  ·  ·  ·  ·

Step 2: GREEN BOX IS AT HIT ZONE — SWAP TO FIST NOW ✓
·  ·  ·  [=◉=============]│  ·  ·  ●  ·  ·  ·  ·  ·  ·  ·  ·

Step 3: Orange bar arrives — mainhand swings, window closes
·  ·  ·  ·  ·  ·  ·  ·  ·  │◉  ·  ·  ·  [====GREEN====]│  ·  ·
```

What Good Timing Looks Like

When your fist punch lands inside the green window, the hit zone bursts into a **gold explosion** and you hear the punch sound.

```
PERFECT WEAVE
·  ·  [===◉===]│  ·  ·     ← Note hits hit zone inside green box
            ✦✦✦✦✦           Gold explosion fires
```

What a Miss Looks Like

If the dual-wield check fails or your weave lands outside the window, small **grey drops** fall from the hit zone.

```
MISSED / FAILED
·  ·  ·  ·  ◉  ·  ·  ·    ← Note passes hit zone, no weave
           ·  ·            Grey drops fall
          ·    ·
```

End-of-Fight Grade Screen

When the mob dies, the overlay shows your performance for that fight:

```
┌──────────────────────────┐
│           S              │  ← Letter grade (S / A / B / C / D / F)
│        96.3%             │  ← Weave accuracy
│    Avg React: 142 ms     │  ← Average time from swing to your weave
│    Combo x12             │  ← Longest hit streak
│    Score: 2840           │
└──────────────────────────┘
```

Press **Space** or click to dismiss.

---

4. Calibration

Automatic Haste Sync

Basketweaver watches for haste information in your log. When your server reports your haste percentage (via `/mystats` or a spell landing), it automatically recalculates the interval and adjusts the highway speed.

After a haste sync you will see a banner:

```
Haste sync: 1.25s  (60% haste)
```

No manual action needed.

Manual Interval Adjustment

If auto-sync hasn't fired yet (e.g. at the start of a session), you can set the interval manually:

Right-click tray icon → **Interval** → select the seconds value that matches your current haste.

You can also use the arrow keys while the overlay is focused:

- `↑` — increase interval by 0.25s
- `↓` — decrease interval by 0.25s

If Weaves Feel Early (green box arrives too soon)

Increase **Target Offset** (shifts the hit zone timing later):

Right-click tray → **Target Offset** → try 25 ms, 50 ms steps

Or with the keyboard while overlay is focused: `]` — add 25 ms offset `[` — remove 25 ms offset

If Weaves Feel Late (you're always catching the tail of the green box)

Decrease Target Offset back toward 0, or adjust **Latency Comp.** if your network adds delay between when you act and when EQ registers it:

Right-click tray → **Latency Comp.** → try 25–75 ms

Keyboard: `'` — add 25 ms latency comp `;` — remove 25 ms latency comp

Calibration Quick Reference

Symptom	Fix
Green box arrives too early, weaves clip	Increase Latency Comp.
Green box arrives too late, mainhand delays	Decrease Latency Comp.
Notes never reach hit zone	Check your log file is updating (logging on?)
Bars don't appear	Enter combat — bars only show during active fighting
Interval wrong after buff / zone	Use ↑ / ↓ keys or set Interval in tray

---

5. Auto-Detection with /mystats

Basketweaver can read your offhand weapon delay automatically from a **calibration macro** output. This is the most accurate way to set your fist delay and requires no manual guessing.

Step 1 — Create the Calibration Macro

In EverQuest, create a social button with the following command:

```
/mystats
```

Step 2 — Use It In Combat

After fighting with your fist weapon for at least 30–60 seconds (to build up DPS statistics), press the macro button.

Your log will contain output like:

```
---- Melee Primary: HandToHand ----
---- Melee Secondary: Fangs of Vyzh'dra the Exiled ----
Dmg = 1 to 47, ave = 23.4
DPS = 6.2 to 14.8, ave = 12.3
```

Step 3 — Auto-Detection Fires

Basketweaver reads this output and calculates the weapon delay from the damage/DPS ratio. A banner appears:

```
  Offhand: Fangs of Vyzh'dra  (delay 19 → 1.9s)
```

The offhand delay and weapon name are saved automatically and persist across sessions. The green weave window will immediately resize to match.

> ***Note:*** *The macro must be run while you have HandToHand as your* ***primary*** *weapon stat. If you have a 2H or other primary equipped, the secondary detection will not fire.*

---

6. Tray Menu Reference

Right-click the Basketweaver icon in the system tray to open the menu.

Option	Description
Status	Shows IN COMBAT or IDLE (read-only)
Select Log File...	Choose a different EQ log file
Reset Track	Hard reset — clears all state if overlay gets out of sync
Window Size	Scale overlay to 25% / 50% / 75% / 100%
Target Position	Move hit zone left/right on the highway
Mainhand Delay	Select your mainhand weapon
Offhand Delay	Set your fist weapon delay manually
Interval	Override the post-haste swing interval
Target Offset	Fine-tune hit zone timing (ms)
Latency Comp.	Compensate for network/input delay (ms)
Clip Window	How long after a weave to suppress duplicate detections
Audio	Toggle all sounds on / off
Opacity	Overlay transparency
Quit Basketweaver	Exit the app

---

7. Keyboard Shortcuts

These work when the Basketweaver window is in focus (click it once).

Key	Action
`↑` / `↓`	Interval +0.25s / −0.25s
`]` / `[`	Target Offset +25ms / −25ms
`'` / `;`	Latency Comp. +25ms / −25ms
`,` / `.`	Shift hit zone visually left / right
`R`	Reset track (same as tray Reset Track)
`M`	Toggle audio mute
`Space`	Dismiss grade screen
`Escape`	Quit

---

8. Troubleshooting

Overlay doesn't show bars Bars only appear once you enter combat. Make sure logging is enabled (`/log on`) and the correct log file is selected. The header shows IDLE when no combat is detected.

Interval seems wrong after zoning or getting a haste buff Press `↑` or `↓` to nudge the interval, or run `/mystats` to let Basketweaver re-sync automatically.

Weaves land but are consistently late/early by the same amount Use **Target Offset** or **Latency Comp.** in the tray menu. Start with 25 ms steps and adjust until the gold explosion fires reliably at the moment you click swap.

The track gets out of sync mid-fight Press `R` or use tray → **Reset Track** to hard-reset the engine without closing the app.

Grade screen doesn't appear after a kill The grade screen only fires when the mob you were fighting dies (`You have slain` / `has been slain`). It does not fire if you zone, die, or log out mid-fight.

Audio not playing Click the overlay window once to focus it, then press `M` to toggle audio. You can also toggle via tray → **Audio**.

App asks for a log file every time If the previously saved log file is deleted or moved, the picker will open on launch. Select the new path and it will be remembered.

Basketweaver — built for monks, by monks.
